Concerning: Reference to 380 kV installation of Arbiter PMU's

Dear Mr. de Vries,

We declare hereby that Amprion has installed Arbiter PMU's (model 1133A) in various substations on its 380 kV grid for the purpose of Amprions Wide Area Monitoring System (WAMS). These PMU's work accordingly to the specifications and have so far over a year. The PMU's are connected to a WAM system supplied by ELPROS and this installation is currently functioning without problems.

Amprion GmbH is an important transmission system operator in Europe and operates a German extra-high voltage grid with a length of 11.000 km. A population of over 27 million is supplied through Amprion's grid from Lower Saxony down to the Alps. Being an innovative service provider, Amprion provides industrial customers and network partners with an utmost of supply security. The network with the voltage levels of 380.000 and 220.000 volt is accessible to all players in the electricity market on a non-discriminating basis and at competitive and transparent terms. Moreover, Amprion is responsible for one of the largest grid areas in Europe and assumes an important task in the European interconnected system.

Kind regards

Amprion GmbH

i.V. Dr. Christoph Dörnemann
