

Model 928A Current Input Connector Upgrade

Effective January 1, 2016

The Model 928A Power System Multimeters shipped after 2015 feature a redesigned current input. The redesign includes changes to internal components but the most visible change is the current input connectors, which are upgraded to a metal, panel-mounted style to enhance its strength and durability. The impeccable accuracy and functionality remain the same.

Factory upgrades to the new connector style are available for \$300.

Factory replacement of the original connector style (connector only) is available for \$150 until supplies are exhausted.
